**Data Drive Thru's PC Eraser™ Eliminates All Hard Drive Computer Files
to Department of Defense Standards**

***Are you confident that your personal and business files are forever deleted from your
old PC or laptop? If you don't use PC Eraser, chances are they are still there!***

Dallas, Texas – October 11, 2006 –Data Drive Thru, Inc.™ has created a simple and unique way to destroy and delete any personal and business computer files that exceeds the standards set by the U.S. Department of Defense. It is called the PC Eraser™ and its simple plug-and-play function makes it possible to quickly identify and destroy any unwanted files or other hard drive data.

The theft of personal information and sensitive business data is a growing global problem. Businesses are initiating all levels of security to prevent the unlawful access to a variety of files and data. However each year, millions of businesses and individuals exchange, donate or trade-in their personal computers thinking that their files on the hard drive have been completely erased and that they are safe from any type of fraud. Unfortunately, in many cases this is just not true.

PC Eraser™ offers multiple methods to delete select files from the hard drives of computers in accordance with two U.S. Government Department of Defense standards and the even more robust Guttman method. The graphic user interface allows you to select files using either the drag-n-drop method from a Windows® based GUI or from PC Eraser's™ File Selector function. You simply click on "destroy" and your files disappear. The interface also allows you to specify files and extensions that you do not want to destroy, and to destroy any remnant data located in unallocated disk space.

"We created PC Eraser™ to solve a very dangerous problem that most people did not know exists," said Paul L. Andrus, Founder and CEO of Data Drive Thru. "Computer users are still under the impression that all you have to do is hit the delete button and your files are destroyed. Even businesses have not been completely successful in eliminating files from old PC and laptops that are recycled, pitched or donated to non-profit organizations."

Andrus added that it is easier than you think for a computer savvy thief to find and copy all types of information from hard drives of old computers. "The best way to ensure the safety of your personal and business data is to make sure it is deleted using the PC Eraser's proven technology."

PC Eraser™ lists for \$29.95 and can be purchased from www.datadrivethru.com or www.thetornado.com.

Data Drive Thru also created The Tornado™, which has quickly become a “must have” device for anyone who owns a personal computer or manages an enterprise IP network. The Tornado™ is the fastest and easiest way to move files from one PC to another. Just plug the USB cables into the USB ports and The Tornado™ networks two PCs in just seconds showing the entire contents of both computers on an easy to use split-screen interface. With The Tornado™ there are no wizards to follow, software to install, or cables to buy – just plug it in. A split screen showing the entire contents of each computer appears and you simply drag and drop the files you want to move from one machine to the other at speeds up to 25 MB/s.

“The number one problem faced by millions of replacement computer purchasers is the challenge of moving files and personal information off their old computer and onto a new one,” said Paul L. Andrus, “The Tornado™ solves that problem with its unique patented technology and ease of use. And now our PC Eraser™ product will help protect customers, so that when they’re through with their old computer, they can recycle it or donate it without fear that they will be the next victim of identify fraud.”

The Tornado™ lists for \$59.95 and can be purchased from www.thetornado.com.

About Data Drive Thru, Inc.

Data Drive Thru™ is the innovator of intelligent computer cable products that solve the problem of data transfer between two personal computers/laptops (PCs). Its unique patented technologies automate the process of getting data from one PC to another. With its global headquarters located in Dallas, Texas, the company is comprised of dedicated entrepreneurs and executives who are passionate about revolutionizing the way data is moved from one personal computer to another and easing the frustration that we all experience when we buy a new PC.
