## **Chimpanzee and Eight Year Old Girl Make PC History by Successfully Networking Two Computers Together Using The Tornado™**

### ***Duo competes against technology experts to prove the speed and ease of operation of Data Drive Thru's revolutionary new computer file transfer tool***

**Dallas, Texas – November 27, 2006** – PC history was made this month as Dallas-based Data Drive Thru hosted a competition between average computer users and certified computer network engineers to see who could successfully network two computers together and transfer files from one computer to another in the shortest period of time. When the smoke cleared, the winners were an eight-year-old girl named Tori Andrus and her teammate Cody, a trained chimpanzee.

The competition was staged at the studios of Incredible Discoveries in Deerfield, Florida, where Data Drive Thru was shooting an infomercial that will be nationally aired in January 2007. The infomercial demonstrates the complete ease of operation and automated connectivity of The Tornado™, which is a patented computer file transfer tool that is so easy to use that “anyone” can use it.

Tori is the daughter of Paul Andrus and Vicki Hill-Andrus of Turtle Lake, North Dakota. Paul is the Founder and CEO of Data Drive Thru. Cody lives with his trainers in Hollywood, California. He has appeared in numerous movies and on the Today Show, where he demonstrated the use of a digital camera and printer station.

Cody networked the two computers together and Tori transferred the files between the two computers before the experts could even get their software loaded. The world premier of the PC contest segment of the infomercial featuring Tori and Cody will be shown at the International Consumer Electronics Show (CES), January 8-11, 2007 in Las Vegas, NV. Data Drive Thru will host a press conference on January 8th to announce the history-making event and give a live product demonstration to introduce The Tornado™ and PC Eraser™ to the media and conference participants.

“We created The Tornado™ with the average computer user in mind and have stated all along that the product was so easy to use that anyone could successfully use it,” said Paul Andrus, Founder and CEO of Data Drive Thru. “The demonstration with Tori and Cody, along with the infomercial, is our way of proving our claims and having a little fun with our products.”

The Tornado™ features two retractable USB cables and networks two PCs in a matter of seconds simply by plugging it into the USB ports of each computer. A user-friendly split-screen automatically appears showing the entire contents of each computer and allows for a simple drag and drop action to move files from one PC to another at speeds up to 25 Mb/sec. The Tornado™ also can be used to quickly back-up files to another machine and is compatible with most Microsoft® operating system programs. [www.thetornado.com](http://www.thetornado.com)

PC Eraser™ offers multiple methods to delete select files from the hard drives of computers in accordance with two U.S. Government Department of Defense standards and the even more robust Guttman method. The graphic user interface allows you to select files using either the drag and drop method from a Windows® based GUI or from PC Eraser's™ File Selector function. You simply click on “destroy” and your files disappear. The interface also allows you to specify files and extensions that you do not want to destroy, and to destroy any remnant data located in unallocated disk space.
