Business Professionals Praise The Tornado™ As an Efficient and Effective Computer File Management and Transfer Tool

Dallas, Texas -- October 30, 2006 -- As Dallas-based Data Drive Thru sells more and more of its new Tornado computer file transfer tool at www.thetornado.com, the company has received a number of emails from business professionals who have found several valuable applications for the product in their day-to-day business operations. The Tornado™ is a patented computer file transfer tool that automatically networks two computers, so that moving information from one to the other is as easy as dragging and dropping a file.

Dallas Accounting Firm Montgomery, Coscia and Greilich, LLP. www.mcgggroup.com found a new way to safely and accurately transfer financial records during field audits from the client's computers to their own laptops without copying files or downloading large amounts of sensitive network data. When these audits take place in the field at a client's office, it is even more challenging to secure guarded copies of proprietary financial information and to transfer that required data onto the accounting firms portable computers.

"The Tornado™ saves our accounting firm both time and money with the speed in which it networks computers and transfers files during our field audits," said Paul Greilich, Lead Audit Partner at Montgomery, Coscia and Greilich, LLP. "Often, the financial files we copy are very large and difficult to transfer to a disk or memory stick. However, because The Tornado™ automatically transfers the entire file from one computer to another, the file size is no longer an issue."

Greilich added that The Tornado™ works very well in all types of business and personal computer file transfer situations, and that it also offers an added layer of information security to protect a client's records. "That file protection and information accuracy is essential in the accounting industry," Greilich said.

Dr. Ron Attanasio of Lincoln, Nebraska, attributes his computer file and data management success to The Tornado™. As a busy professional who is a dentist, full time professor at The University of Nebraska and the president of a start-up software company, he uses The Tornado™ to keep a synchronized and balanced record of all the computer files on his laptop, desktop and portable slate tablet?

Dr. Attanasio's world is all about managing information, time and patients. He frequently interchanges his laptop, desktop and slate tablet as the workstation of choice depending on where he is and what is doing at the time. In the classroom, he uses his laptop and slate tablet to take notes and to record lecture information. He uses his slate tablet while visiting patients to update medical information and also to take quick notes on changes in their conditions and treatments. At his software company Aldovision, www.aldivision.com, Dr. Attanasio constantly switches from laptop to desktop to attend business meetings, share presentations, and to record competitive data.

Page Two, Business Professionals Praise The Tornado™

“It is important that the files and notes on my laptop and slate tablet are transferred onto the hard drive of my base desktop computer, so that my academic, patient and business files are complete and in sync with one other. I also need to make sure that I have a reliable back-up copy for all of my work,” said Dr. Attanasio. “Before I found The Tornado™, it was a logistical nightmare to constantly transfer files and data from one machine to another using the available technology.”

“The Tornado™ saves me a lot of valuable time and is the most secure method I have found to help me manage the proprietary files and data that must stay current on all of my computer devices,” said Dr. Attanasio. “The Tornado™ is plug and play easy and is small enough for me to take along to business meetings and when I travel.”

Road Warriors like John Reed, Senior Account Executive with Outdoor Promotions in Denver, Colorado, a Billboard Sign Company, have found The Tornado™ to be a valuable part of their portable tool arsenal for transferring large and complex client files from field laptops to office-based computers. www.outdoorpromotionsinc.com

John and his sales associates travel a great deal of the time to meet with clients all over Colorado and Nevada, and it is important that they have the ability to quickly and accurately download files, billboard art, and other client information on the road or when they return to the home office.

“We need a computer file transfer tool that is quick, secure and most of all, easy to use,” said John Reed. “Most of the sales guys around here are not computer experts and do not have time to be loading a lot of complex software or copying disks in order to share and transfer files from one computer to another. Also, the size of the files sometimes makes it difficult to copy or transfer to a memory stick. The Tornado™ solved all of our computer file management challenges.”

“The Tornado™ helps us make sales and is an inexpensive way to keep up and share important customer presentation, files and artwork,” said John Reed. “Its pocket size design makes it easy to take anywhere. I highly recommend it to any business professional.”

“It is exciting to hear from so many business professionals on how they are using The Tornado™ to help with their file management and transfer challenges,” said Paul L. Andrus, Founder and CEO of Data Drive Thru. “We also are hearing from a lot of new computer purchasers, who are very happy with the ease and convenience The Tornado™ offers in transferring files from their old computer to their new one. It is quickly becoming a must-have computer tool.”

The Tornado™ was created and patented by Data Drive Thru, Inc. in Dallas, Texas. This revolutionary product features two retractable USB cables and networks two PCs in a matter of seconds simply by plugging it into the USB ports of each computer. A user friendly split-screen automatically appears showing the entire contents of each computer and allows for a simple drag and drop action to move files from one PC to another at speeds up to 25 Mb/sec. The Tornado™ also can be used to quickly create back-up files and is compatible with most Microsoft® operating system programs.

Data Drive Thru also is the creator of the PC Eraser™ that offers multiple methods to delete select files from the hard drives of computers in accordance with two U.S. Government Department of Defense standards and the even more robust Guttman method. The graphic user interface allows you to select files using either the drag and drop method from a Windows® based GUI or from PC Eraser's™ File Selector function. You simply click on “destroy” and your files disappear. The interface also allows you to specify files and extensions that you do not want to destroy, and to destroy any remnant data located in unallocated disk space.
